

The motto of this International Conference by the Pratik College of Education, Siwan, Bihar-841245, India: "**Indian Knowledge System: Post Colonialism & Globalisation Era**", held on 23rd and 24th August 2025, conveys a powerful and layered message about the journey, resilience, and relevance of India's traditional knowledge in the modern world:

1. Revival and Reclaiming of Indigenous Knowledge (Post-Colonialism)

- After centuries of colonial rule, Indian knowledge systems — such as Ayurveda, Yoga, classical philosophy, arts, mathematics, astronomy, etc. — were marginalized or devalued.
- The "post-colonial" era refers to the period after India gained independence in 1947. It suggests an ongoing **re-evaluation and revival** of indigenous knowledge that was suppressed or neglected during colonial times.
- It also points to a **cultural reawakening** — reclaiming pride in India's intellectual heritage and seeking to decolonize education and thinking.

2. Adaptation and Relevance in the Age of Globalisation

- "Globalisation" refers to the increasing interconnectedness of the world in terms of economy, technology, culture, and knowledge.
- Indian knowledge systems are not just being revived internally but are also being **recognized globally** (e.g., Yoga Day celebrated internationally, Ayurveda's global market growth, interest in Indian philosophy).
- The message here is that traditional Indian knowledge can **coexist with and contribute to modern science, medicine, sustainability, and ethics** in a global context.

3. Integrating the Traditional with the Modern

- The phrase encourages **integrative thinking** — combining ancient wisdom with modern innovation.
- It calls for an **educational and intellectual transformation** where Indian knowledge systems are not seen as outdated, but as living traditions with relevance to modern problems (climate change, mental health, wellness, education, etc.).

4. Self-Reliance and Cultural Identity

- It promotes a **return to roots** — not as a rejection of modernity, but as a foundation for self-reliant and culturally rooted development.
- It also challenges the dominance of Western models of knowledge and development, suggesting that **alternative, locally grounded paradigms** can be just as valid and impactful.

"Indian Knowledge System: Post Colonialism & Globalisation Era" sends the message that India is rediscovering and repositioning its ancient knowledge systems not only as a matter of heritage but as tools for sustainable, ethical, and meaningful living in the modern global era.

It's a call to value the past, adapt to the present, and shape the future — rooted in Indian wisdom, yet open to the world.
